Re Proven 6KW wind Turbine.

Dear Christine,

I thought I should write now the turbine has been installed for some eight months now to let you know how things are going.

As you know, we are 100% electricity reliant here at Cliffe Cottage and were paying £225.00 per month for our electricity even with a good tariff.

I am pleased to say that not only have we just had a rebate of nearly £400 but, the supplier has reduced our monthly DD to £162.00 per month based on reduced consumption.

What is good is that the reduced consumption comes at a time when we have had five people living here and running an extra two freezers for my wife's business so I feel further reductions will occur.

On another note, since October 2007, we have produced over 4,000 KW hrs and, with the price of ROC certificates going as near as £52.00 each at auction, I have made another £200 for nothing and that is without exporting.

Debby and I are very happy with our turbine and know we made the right choice using Aeolus to install it, Peter's speed in coming to site on time to install and the neat and tidy installation was appreciated.

May I also add we obtained quotes from other suppliers and your price was by far the best with the quickest on site survey promised and carried out on time?

If you have any clients wishing to inspect a working 6KW turbine or, want to give my phone number out, I will happily tell them how a generally critical man is happy!

Kind regards,

Mark Williams.
